training program

WE CREATE EXPERTS

Through training at your site, at our locations
or in virtual meetings.

Our training covers all relevant topics: from the functionalities of our products through maintenance and inspection up to individually requested requirements. We turn your professionals into experts.

TRAINING CONTENT

Thanks to the modular design, you can set up your individualized Zeppelin training program: You select the combination tailored to your needs - theoretical and practical content.

Training courses are held either at your site or at Zeppelin Systems locations. The Friedrichshafen location also offers descriptive live demonstrations in the renowned Zeppelin Technology Center.

In addition to the basic modules, we also offer special training programs tailored to your plant or products. Take your pick from the following focus areas: plant-specific designs, PFD & PID reviews, process flow statement, or customer-specific function descriptions.

All theoretical modules are also available as online training. The contents from different basic modules may of course also be freely combined.

TARGET GROUP

Whether for operators, maintainers or technologists, our training courses are designed according to knowledge levels. Decide which group of participants should be trained.

Your process engineers need in-depth detailed knowledge and scientific background? Then training courses on the functional principles of components and technologies are just what you need. For maintenance and service topics, our training courses offer a high degree of practical relevance.

TRAINING OBJECTIVE

The Zeppelin training program helps you understand your components and systems. So that you can operate your plant safely and efficiently.

TRAINING PACKAGES AT A GLANCE

TRAINING PACKAGE

BASIC MODULE

THEORY

1

ONE-DAY BASIC TRAINING

- 4 x 90-minute training blocks
- Lunch, electronic handout ** and certificate
- 3-10 participants

2

3-HOUR ONLINE TRAINING

- 2 x 90-minute training blocks
- 3-10 participants

TECHNOLOGIES

- pneumatic conveying systems *
- Hydraulic conveying systems
- Pellet cleaning*

COMPONENTS

- Silo
- Rotary feeder
- Diverter valve
- Filter

* including demonstration in the Zeppelin Technology Center

PRACTICAL APPLICATION

3

ONE-DAY BASIC TRAINING

- 60-minute training block – theory
- 5 hours of training blocks – practical application
- Electronic handout ** and certificate
- 2-5 participants

COMPONENTS

- Rotary feeder CFM ***
- Rotary feeder CFH ***
- Diverter valve VST and TST ***

** printed handouts may be prepared if needed

*** basics and preventive maintenance

WHAT YOU NEED TO KNOW

- Prices based on above-mentioned basic modules / training time.
- Basic modules cover above-mentioned topics in general, contents are not customized.
- For participants with different levels of knowledge or for numbers of participants above the maximum limit, two or more groups should be formed.
- Other training modules not listed (e.g. specific technologies or products) are available on request.
- Customer-specific training content, theoretical or practical, practical training at your location, travel bookings or other requests can include additional costs.

Request your personal training package, tailored to your needs. The modules listed above are only an excerpt from the many possible combinations.
